Test plan

1. Questions
   - Can you give us the mile stone for this project?
   - Which os version we will support? (for windows, macOSX, Unix, iOS, Android)
   - Can I determine when we start the automation test?
   - Do you want an automated test for UI testing? Please give us the design.
   - Do you want to check SEO? Please give us the specification for SEO.
2. Team member: 10 members: 7 dev and 3 qc
3. Milestone: asking in section 1.
4. Test scope: both windows, macOSX, Unix, iOS, Android.
5. Plan to create test cases for manual: we will start test manual first.
6. Plan to create test cases for automation: next we will start develop automation test scripts.

Tools

1. Katalon (Using for both functional testing and API testing)
2. Code Selenium and Rest assured(if we use Java)

Architecture of the test scripts

1. Using Page object model (POM) for functional testing (Katalon or Selenium)
2. Using Rest assured for API testing
